DETAILED ACTION

Response to Amendment

1. Receipt is acknowledged of the After Final Amendment filed March 05, 2004. The applicant cancelled claims 30 and 36 and amended claims to further define the present invention.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Michael W. Taylor on March 11, 2004.

The application has been amended as follows:

IN THE SPECIFICATION:

Please insert the following paragraph immediately following the title of the application on page 1 of the Specification.

-- This application is a 371 of PCT/FR00/00465, filed February 24, 2000. --

Allowable Subject Matter

3. Claims 5-29, 31-35, and 37-44 are allowed.

The following is an examiner's statement of reasons for allowance: The cited prior arts of record, Schwartz (US 4,985,921); Pockrandt et al. (US 5,678,027) taken alone or in combination with other reference do not disclose, teach, or fairly suggest a chip card and a method for securing access to a chip card comprising *inter alia* a microprocessor including a first register for storing a

multibit identification code identifying an entity to be executed, and for updating the first register during execution of a new entity by storing therein a first label associated with the entity being executed, a checking device for receiving the multibit identification code and for checking whether access to locations in a memory connected to the microprocessor is authorized for the new entity by comparing the first label with a second label, where the second label is associated with the locations in the memory. If execution of the first application program needs intervention of a second application program, then the first application transmits a call instruction to the microprocessor requesting such intervention. Then, the first register is updated based on the call instruction for storing a second code, on the at least one check bit, corresponding to the second application program to be executed. Schwartz in view of Pockrandt discloses a special code for improving security of data within an IC card, which do not disclose the claimed features. Accordingly, one of ordinary skill in the art would not have been motivated to modify teachings of prior art to meet the claimed limitations as set forth in the present claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
